

Happy Father's Day

Volume 7, Issue #6

National Rose & Safety Month

Founders Message

With a blink of an eye, June is already here! This is the busiest time of year for us as we are well in to the growing season - pruning, mowing, fertilizing, fighting off weeds, monitoring irrigation, and installing new landscaping are just a few of our many priorities during the summer months.

During the fast-paced summer, safety is crucial to the success of our operation. We have a weekly tail-gate safety training program in place and a larger monthly safety and landscape skills training program. At these meetings our supervisors reinforce safe working practices and demonstrate best practices and techniques in landscape maintenance and installation. It is our goal to continually educate our crews with the latest in the industry so we can provide exceptional service to you. We thank you for counting on our skilled team of landscape professionals to achieve your landscape goals!

Wishing you a wonderful summer,

John and Denise Fitzgerald
Landesign C&M, Founders

National Rose Month

Roses are a beautiful addition to any landscape! To keep them producing gorgeous blooms, ensure they:

- Are receiving 6-8 hours of full sun, daily
- Have drip irrigation set up to avoid diseases caused by too much water
- Prune often by Thinning (Removing branches to reduce density) or Reducing (shortening the plant height) or Heading (Forces new buds to grow)
- Know the type of rose you are pruning - pruning style depends on what species you have

We recommend adding rose fertilizer to your rose bushes in March to keep them strong year-round.

To read more tips on Rose Care, go to [Celebrate National Rose Month with modern roses](#) by Beth Hyatt at Total Landscape Care.

CVS in Sebastopol

Earlier this year, our construction division installed new [drought tolerant landscaping](#) at the new CVS location in Sebastopol, CA.

The landscaping included a variety of grasses - read below to learn more!

1. **California Gray Rush** is a unique plant that can withstand both dry conditions and wet, saturated soils
2. **Prairie Fire Sedge** is highlighted by orange in the stems
3. **Berkeley Sedge** is a low growing grass of green bunches, that is drought tolerant once established

The general contractor for the project was Stewart James Construction, Inc. and the Landscape Architect was David Briley with Blair, Church & Flynn Consulting Engineers.

Do you have a landscaping project in mind?
